

Privacy Policy

Commitment to Data Sovereignty, Localized Intelligence, and Privacy-First Design

Last Updated: August 8, 2026

Version: 1.0 (Local-First Release)

PRIVACY-FIRST PHILOSOPHY: At Sentinel AI, we believe your documents belong to you. We have built our architecture to operate **entirely offline/locally** by default. We do not track you, we do not monetize your data, and we do not store your ingested PDFs on any cloud servers.

1. INTRODUCTION

This Privacy Policy outlines how Sentinel AI manages data. Because Sentinel AI is designed as a localized, RAG (Retrieval-Augmented Generation) document intelligence platform, our data processing model is fundamentally different from cloud-based AI services. We prioritize local execution to ensure total data sovereignty for our users.

2. DATA WE DO NOT COLLECT

To provide maximum security, Sentinel AI does not participate in the following practices:

- **No Telemetry/Analytics Tracking:** We do not embed analytics scripts, trackers, or cookies that report usage patterns, IP addresses, or document fingerprints back to a central server.
- **No Document Hosting:** We do not upload your PDFs, Word documents, or raw text files to the cloud. All file processing happens locally in your environment.
- **No Model Training:** We do not use your private documents to fine-tune external models.

3. HOW WE PROCESS YOUR DATA

Sentinel AI operates on your infrastructure (or local machine) utilizing the following privacy-preserving technologies:

- **Local Embedding Generation:** We use `sentence-transformers/all-MiniLM-L6-v2` which runs locally on your CPU/GPU. No text segments are sent to external APIs for embedding.
- **Local Storage:** Our vector database (ChromaDB) stores all indices locally on your file system.
- **Local RAG Pipeline:** Your queries are matched against your local database without leaving your private runtime environment.

4. OPTIONAL EXTERNAL CONNECTIONS

Sentinel AI offers "Advanced Modes" which allow you to connect external LLM APIs (e.g., OpenAI, Anthropic, or Hugging Face Inference Endpoints). **Please be advised:**

- If you choose to input a personal API key, you are establishing a direct connection between your local environment and that provider.
- The data transmitted to the LLM provider is subject to the privacy policy of that specific service provider.
- Sentinel AI does not intercept, log, or store the API keys or the data sent through these third-party connections.

5. SECURITY OF YOUR DATA

Because your data resides entirely on your local machine, the security of your documents is effectively governed by your own access controls, encryption, and local device security. We recommend hosting Sentinel AI within a secure, authenticated, and password-protected environment.

6. CHANGES TO THIS POLICY

We may update this Privacy Policy to reflect changes in our architectural approach or security protocols. Any updates will be reflected in the `README.md` or documentation within the Sentinel AI repository.

Data Privacy Inquiries

For questions regarding Sentinel AI's privacy architecture or to request security-focused customizations, please contact our team via the repository at github.com/sritamcodes/Sentinel-AI.
