

Terms & Conditions of Service

Official Operational Governance & Privacy-First Architecture License Agreement

Effective Date: August 8, 2026

License Type: MIT Open-Source with Enterprise Usage Provisions

Document Ref: TER-SEN-2026-V2

Repository: sritamcodes/Sentinel-AI

LEGAL BINDING NOTICE: Please review these Terms and Conditions prior to initializing, hosting, or embedding the Sentinel AI compliance suite, local vector database instances, or document chunking pipelines. Utilizing Sentinel AI constitutes full agreement with these provisions.

1. EXECUTIVE OVERVIEW & PLATFORM SCOPE

By downloading, cloning, or deploying **Sentinel AI** (including its Claymorphic Streamlit user interface, LangChain retrieval orchestrations, PyPDF parsing layers, and Chroma vector engine), you ("User", "Licensee", or "Organization") agree to operate the software in accordance with this agreement.

2. ARCHITECTURAL PRIVACY & DATA SOVEREIGNTY

Sentinel AI is engineered around strict data minimization and local execution principles:

COMPONENT	DEFAULT OPERATIONAL MODE	DATA TRANSMISSION STATUS
Text Vectorization	Local <code>sentence-transformers/all-MiniLM-L6-v2</code>	Zero external API communication (100% On-Premise)
Vector Database	Embedded local ChromaDB instance	Stored locally on host filesystem
Document Ingestion	Local PyPDF extraction & sanitization	Processed strictly within local runtime RAM

No document text, vector representations, metadata, or queries are sent to external cloud third parties unless the User manually provisions an explicit Hugging Face API key or external Inference Endpoint in the advanced configurations.

3. LICENSE RIGHTS & DATA OWNERSHIP

3.1 Open-Source License Authorization

The Sentinel AI codebase is licensed under the terms of the MIT License. You are granted full permission to run, modify, extend, and redistribute the application for personal, internal business, or commercial operations.

3.2 Complete Ownership of Ingested Assets

The User retains absolute ownership, title, and copyright over all raw source PDFs, parsed text fragments, vector embeddings, citation graphs, and compliance audit reports generated by Sentinel AI. The platform makes no claim of ownership over user-supplied content.

4. ACCEPTABLE USAGE & SYSTEM SAFEGUARDS

Users and administrators commit to the following operational guardrails:

- **No Exploitation:** Do not submit engineered, corrupted, or polyglot PDF files intended to perform buffer overflows or arbitrary code execution against underlying engine tools (e.g., PyPDF, WeasyPrint, or SQLite handlers).
- **Access Regulation:** If making Sentinel AI accessible via public hostnames or Streamlit Community Cloud, administrators are responsible for implementing edge-level access management and authentication.
- **Ethical Auditing:** The platform shall not be used to bypass legal discovery processes, falsify regulatory documents, or perform fraudulent compliance assertions.

5. AI AUDIT DISCLAIMER & LEGAL INDEPENDENCE

Sentinel AI utilizes semantic similarity algorithms and probabilistic language processing to index and query documents:

- **Non-Binding Analysis:** Output generated by Sentinel AI—including similarity scores, chunk retrievals, and automated risk analysis—does not constitute binding legal, statutory, accounting, or risk management advice.
- **Manual Verification Mandate:** End users are strictly required to audit all flagged page numbers, citations, and source snippets against original physical or certified digital documents before issuing statutory compliance filings.

6. LIMITATION OF LIABILITY

To the fullest extent permitted under governing law, Sentinel AI, its core contributors, and maintainers shall not be held liable for direct, indirect, incidental, or consequential damages (including data loss, financial penalties, or regulatory sanctions) resulting from the deployment or reliance upon this software suite.

7. THIRD-PARTY SOFTWARE ATTRIBUTIONS

Sentinel AI builds upon open-source software libraries, including Streamlit, LangChain, ChromaDB, PyPDF, WeasyPrint, and Hugging Face Transformers. Each component remains subject to its respective open-source license (MIT, Apache 2.0, or BSD).
